| 20 | plastic tank |

FEATURES

VODISIL is a transparent impregnating paint based on silicone resins and silicate crystals in emulsion. Applied on porous surfaces, it acts by absorption and by drying it forms a dense network of invisible crystals that guarantees for several years an absolute waterproofness of the treated structures without changing the appearance and breathability.

PRIMARY USES

VODISIL is used for the treatment of all absorbent surfaces such as plaster, concrete, terracotta bricks, stone, tuff, etc.

INSTRUCTIONS FOR USE

VODISIL should be applied on dry and dust-free surfaces. **VODISIL** can be applied in one or more coats following the "fresh-on-fresh" method. If necessary, to ensure absolute impermeability even in the mass, it is possible to immerse the terracotta, concrete, stone products in tanks containing **VODISIL**.

Consumption: from 0,150 to 0,300 lt/mq

Application: roller, brush or airless pump

Storage: 12 months in original cans
